HOWO MAX

COMFORT SAVE FUEL STRONG POWER

Now I'm going to show you the new Howo MAX. Drivers who have seen this car say that the new car is much stronger than the old Howo model before, mainly to experience comfort. Not only look comfortable, sit comfortable, feel more comfortable. The rear sleeper of HOWO MAX is widened on both sides, and the widest point can reach eight hundred fifty mm, which has reached the mainstream level of the industry, and the driver has no problem to rest. Under the sleeper is equipped with the original one thousand W power inverter plug, cooking, boiling water, electrical charging can be met, and also saves the trouble of card friends in the future modification.

With SinoTruk's own MC series engine and Weichai WP series dual "core" powerful engine, HOWO has more than twenty power matching, horsepower range from four hundred to five hundred eighty, which can bring higher fuel economy. MAX can be equipped with Weichai WP twelve, WP thirteen national six diesel engines, can also be equipped with MC series engines. Under the top power, the car matches the SAMT sixteen gearbox of SinoTruk's first worst-free shift, the Man series maintenance-free axle, and the modular chassis design brings the driving experience of strong power, low fuel consumption and high reliability, while climbing and overtaking are more comfortable.

In addition to efficient power, the car is matched with SAMT sixteen wordless automatic transmission, which makes the vehicle lightweight and consumption resistance layout remarkable. The power chain matched with the MC and Weichai WP series as the core brings lower fuel consumption. At the same time, with a low wind resistance design, supplemented by chassis modular, lightweight layout, the vehicle weight reached eight fifteen T, which can make the fuel consumption of one hundred kilometers lower than the competition twenty-three.

Howo MAX rear axle adopts MAN technology MC twelve BGY with thirty-seven speed ratio, which can not only meet the transportation needs of standard load logistics such as green Pass, but also easily handle the complex working conditions of less load distribution and coal transportation. Howo MAX also realizes remote diagnosis, data analysis and other functions through SinoTruk Intelligent communication platform system. The vehicle meets L2 automatic driving level, which includes LDW lane departure warning system, ACC adaptive cruise system, AEB automatic emergency braking system, EBS+ESC electronic braking system and body stability system, etc., to actively protect driving safety.

In terms of safety, HOWO MAX is equipped with incylinder braking technology, combined with Voith hydraulic retarder, a series of active and passive safety systems such as the new three hundred sixty degree circumnavigation system, so that drivers are not afraid of complex road conditions such as mountains and worry-free travel.

SITRAK

COMFORT SAVE FUEL STRONG POWER

High-end series

Now allow me to provide a brief overview of our inventory of China National Heavy Duty Truck Sitrak series secondhand trucks. Our stock mainly comprises the heavyduty Haowo and Sitrak series. The Sitrak series includes models such as G7S G7H C9H G7 C5H and C7H while the HOWO series offers models like A7 TH7 TX and T7H covering various series throughout the year. All readily available in our inventory. Our used cars primarily come from trade-ins.

Prior to receiving any vehicle, we meticulously inspect its maintenance records to ascertain whether there have been any significant repairs or accidents. Additionally, we scrutinize the vehicle's accident history to determine if it has encountered any accidents or water damage. Hence, we ensure that each used truck undergoes rigorous testing to eradicate any assembly issues or hidden risks, guaranteeing the delivery of a dependable vehicle to you.

Premium used trucks low mileage Professional evaluation

In addition to our brand new models, we proudly present a wide selection of meticulously tested used cars. The availability of highend heavyduty trucks in the secondhand market is currently limited, especially those with recent model years and excellent conditions. However, our credentials for testing and trading used cars are unparalleled, coupled with standardized procedures for seamless transactions. We spare no effort in ensuring the quality and dependability of our used cars.

Our comprehensive inspections cover every aspect from thorough examinations of the vehicle's framework to rigorous road testing, evaluation of startup equipment performance, cockpit assessments, brake bench tests, and meticulous checks of the vehicle's chassis, engine compartment, and lighting system. Furthermore, we meticulously assess the vehicle's functional features: OBD system, exterior appearance, battery health, air conditioning functionality, brake fluid condition, tire status, and more. Our ultimate goal is to deliver a hassle-free purchasing and ownership experience to our customers.
